

MCPP – Week 18
PRACTICAL EXERCISE (PE) 1 GRAPHIC CONTROL MEASURES
FACULTY SPOOL GUIDE

1. Purpose

To demonstrate an understanding of the definitions, application, and graphical representation for some of the most common graphic control measures that were previously presented in the EWS Graphic Control Measures and Airspace Control Measures Self-Paced Text and apply them to this practical exercise.

2. Method

Graphic Control Measures PE (1) is an individual homework assignment due prior to Week 20. students need to have their map, the starter graphics, the OLD DOMINION OPORD, and a blank piece of acetate.

3. What to Do

- a. Recommended solutions will be provided to instructors to answer questions at the start of the week 20 seminar.
- b. Ensure that each student gets a copy of the starter graphics for Old Dominion to transfer to their acetate. The students need to put their acetate on the map, refer to the OPORD, and check for accuracy. This will define their area of operations for the remainder of the module. This will be needed before starting the Mission Analysis: Purpose and Information Requirements practical exercise during Week 20.
- c. Review the student results during their Mission Analysis seminar (Week 20). Some of what the students learn in mission analysis will be based on the starter graphics. They will have to analyze the overlay to look for implied tasks. The graphics must be complete and accurate (not sloppy). This means templates should be used for unit symbols, proper colors should be used, and handwriting should be legible.
- d. Each student needs to have three pieces of acetate each cut to 20" x 24". These pieces of acetate will be used for different PEs throughout the module. Tell students to edge the acetate with 100 mph tape (duct tape) to help preserve it.
